SUMMARY

- Project lead on CI/CD infrastructure development
- 5+ years of DevOps/SRE experience
- 10+ years total professional software experience
- Background in bioinformatics

SKILLS

Languages: Kotlin, Python, bash, Java, L^AT_EX, C, C++, C#, Javascript, django, React Native, SQL

Tools: Git, docker, Atlassian Bamboo (CI/CD), Android Studio, EC2, Terraform, Ansible, AWS, Kubernetes

Operating Systems: Windows, Linux, Android

WORK / PROJECT HISTORY

Conjured.Ink – DevOps Engineer (Sept. 2025 to Mar. 2026)

An open-source project to facilitate indie creation

- Provided support for DevOps and general operations on a three-person team, coordinating the efforts of a burgeoning open-source project.
- Set up development servers, standardized and automated the release and testing process.
- Left when the project went defunct in March of 2026.
- Languages and tools: Forgejo (FOSS version of Github Actions), Docker, Git, Bash, Python v3.12.

KeepInTouch – Software Engineer (Jun. 2024 to Sept. 2025)

An app to combat social isolation

- Worked solo to bring KeepInTouch android app to public release in August 2024.
- Languages and tools: Kotlin, Android Studio, Java, Room, androidx/Jetpack, xml
- Was responsible for the full stack: Frontend/UI, backend, database development, and publishing.
- The app can be found at <https://play.google.com/store/apps/details?id=com.spencerfabricant.keepintouch>

Extended Medical Leave (Apr. 2023 to Jun. 2024)

Fully healed

Pillar Biosciences, Software Engineer / DevOps Engineer (Jan. 2019 to Jan. 2023)

A biotech and software company specializing in R&D in personalized medicine and cancer diagnosis

- Lead project developer on the CI/CD system and build/installation code. Lead DevOps engineer.
- Standardized, scaled, and streamlined the code testing and deployment environment, resulting in increased testing bandwidth by at least a factor of 10.
- Turned a bare-bones testing suite into a scalable and configurable CI/CD system with a parallel system written to leverage Bamboo and Git's REST API for greater versatility. (Python, Bash)
- Created and maintained elaborate Docker build scripts and environments, allowing any developer in the company to build their testing environment with a web API and allowing automated release builds. (Docker, Bash, Python)
- Wrote end-to-end frontend tests and testing framework in Selenium, freeing other developers from a sizeable amount of QA work. (Python, Javascript)
- Wrote docker microservices for their data pipeline with some work in SciPy and pandas and data transformation. (Python3)
- Performed rollouts and admin work on AWS, and contributed to IaC work.
- Deployed small clusters of EC2 instances for both clients and internal use, utilized S3 for storage.
- Used Ansible and Terraform for deploying staging and demonstration deployments to AWS, and to maintain bamboo agent cluster, ensuring consistent updates to our clusters.
- Informally served as a mentor to junior developers, assisting knowledge flow throughout our teams.

Amadeus (Jun. 2018 to Dec. 2018), Software Engineer**6 Month contract**

A software company that specializes in flight and hotel management

- Optimized software to manage and set hotel rates. (C++)

Google Inc. (Sept. 2016 to Sept. 2017), Site Reliability Engineer

A software company that specializes in the curation of information

- Worked on the backend of a system to automate the rollouts of software updates. (C++, python)
- Managed weekly deployments in Borg (open sourced as Kubernetes).
- Maintained and created metric-aggregating software using Monarch (similar to Prometheus, but proprietary).
- Received and used training in incident management and was a part of their travel/hotel's on-call rotation.

Escher Group, Ltd. (Oct. 2014 to Sept. 2016), Software Engineer

A company that makes software for postal carriers around the world, including USPS

- Designed and implemented system management and monitoring toolkit for a distributed system of computers. (C#)
- Wrote telemetry toolkit used to aggregate data from large fleet of computers on unreliable networks.
- Implemented software to facilitate software installation on a network of computers.
- Wrote and deployed telemetry software package on POS fleet.

Ayuda Media Systems (Apr. 2013 to Aug. 2013), Software Development Intern

A software company that specializes in billboard management

- Worked on stabilization of the Billboard Management System, a company-wide project catered to its clients.
- Merged a third-party partner's additions into the project.
- Became intimately familiar with Chrome's debugging tools.
- Included work on the .NET platform, Windows Azure, functional programming in LINQ.

EDUCATION**McGill University**

Montreal, QC

Bachelor of Science

Concentration: Joint Computer Science and Biology

Notable coursework: Computational Biology, Short-read sequence analysis, graphics in OpenGL, vision in OpenCV and Matlab, algorithm design

NOTABLE VOLUNTEER WORK**Fruit Tree Planting (Jan. 2023 to Jan. 2025)**

- Started a community initiative to plant fruit trees in my town in the front yards of willing participants, free of charge.
- Over two dozen trees planted.
- Performed community outreach, consultation of tree variety and location, and procurement and planting of the trees.
- [Interviewed by local news station, WBZ, in April 2023](#)
